GREETING from the PROGRAM DIRECTORS

The Immunology and Microbial Pathogenesis (IMP) graduate program is a joint venture between the Weill Cornell Graduate School of Medical Sciences (WCGSMS) and Sloan Kettering Institute (SKI). Some IMP faculty members are affiliated with the Hospital for Special Surgery (HSS), a premier rheumatology and orthopedics institute. Drs. Alexander Rudensky (SKI) and Barry Sleckman (WCGSMS) are co-chairs of IMP. All three institutions are located within two New York City blocks and represent a unique, enriching and collaborative training environment.

Over the past few years, IMP has expanded to over 38 labs between the three institutions. Major areas of focus are microbial immunity, host-commensal microbiota relationships, microbial pathogenesis, tumor immunology, molecular and cellular immunology, autoimmunity and inflammation, and immune-therapy. The IMP leadership recognizes the importance of scientific collaboration and has formed strong bonds with the well-known Jill Roberts Institute for Research (JRI), Parker Institute, as well as the Ludwig Center to strengthen both program’s missions and innovation in scientific research and education. These centers have reputations in performing cutting edge research at both basic and translational level by connecting basic researchers, clinicians, pathologists, surgeons and bioinformaticians to improve patient care.

The broad objective of the IMP Program is to offer the highest level of training to the next generation of scientists working in immunology, microbial pathogenesis, and host-commensal interactions. This objective is accomplished through interactive teaching modules to Fundamental Immunology & Microbiology, as well as several mini-courses in advanced immunology with rotating topics ensure that students keep abreast of new developments. To keep up with the demands of analyzing “big” data sets, all students partake in a course on quantitative biology. In their second year, all IMP students take the “admission to candidacy” (ACE) exam that tests the student’s ability to develop, write and orally defend an independent project proposal.

All students do three, 12 weeks long laboratory rotations, each concluding with a mini-symposium where they present their project. The IMP Directors serve as advisors and mentors for all students till they select a thesis lab, which is usually by the end of year one. Upon joining a lab, students are assigned a thesis committee comprised of the mentor and at least two additional faculty. The student meets the thesis committee at least once a year, and if warranted, more frequently. The committee ensures smooth transition through graduate school, offers intellectual and experimental guidance and decides when the student is ready to defend his/her thesis.

IMP provides a rich interactive atmosphere. All students participate in weekly research-in-progress (RIP) seminars where they present their work to the entire IMP community. All IMP members (students, faculty and post-docs) present their work in talks and posters at the annual two-day retreat (usually at Mohonk Mountain House in upstate New York). Finally, students interact with the rich palette of invited speakers for the weekly Tri-I IMP seminar series. These interactions foster collegiality and promote collaborations that are instrumental in furthering the intellectual endeavors of graduate students.

Overall, every effort is made to ensure that all students meet milestones and guidelines towards an intellectually satisfying but timely and productive Ph.D. But more importantly, IMP strives to provide a rich training platform for the most-cutting edge research for the best and the brightest young scientists.

With a warm welcome,

Sabine Ehrt, PhD & Joseph Sun, PhD
Program Directors

IMPORTANT DATES

Fall Registration (Quarter I & II)  
July 10 – August 25, 2017

Chalk Talks  
September 6 – 14, 2017 (4:30 – 6:30 PM)

IMP Scientific Retreat  
October 19 – 20, 2017

Scientific Writing Workshop  
November 15, 2017 (3 – 5 PM)

Spring Registration (Quarter III & IV)  
November 27 – December 8, 2017

First Rotation Symposium  
December 7, 2017 (12 – 2:30 PM)

Winter Recess  
December 18, 2017 – January 5, 2018

Spring Break  
March 5 – 9, 2018

Second Rotation Symposium  
March 29, 2018 (12 – 2:30 PM)

Third Rotation Symposium  
June 21, 2018 (12 – 2:30 PM)

LAB ROTATIONS

Please note that all lab rotations **MUST** be approved in advance by the Program Directors.

First Lab Rotation (September 25 – December 15, 2017)

- Rotation Agreement Due: September 22, 2017
- Rotation Report & Evaluation Due: December 29, 2017

Second Lab Rotation (January 2 – March 23, 2018)

- Rotation Agreement Due: December 29, 2017
- Rotation Report & Evaluation Due: April 6, 2018

Third Lab Rotation (April 9 – June 22, 2018)

- Rotation Agreement Due: April 6, 2018
- Rotation Report & Evaluation Due: July 6, 2018

* The academic year begins on July 1\textsuperscript{st} and ends on June 30\textsuperscript{th}
IMP PROGRAM REQUIREMENTS

Students in the IMP Program are required to complete a program-specific core curriculum. First year of study is spent with didactic courses in Fundamental Immunology & Microbiology, and complemented by electives in anything from cell biology to structural biology. The program offers continued education throughout the graduate studies in the form of an Advanced Topics in Immunology course with flexible topics, an Immunology Seminar Series highlighting the latest developments in the field presented by distinguished scientists, and a student-run Research in Progress (RIP) seminar for critical discussion of their thesis research and the exchange of ideas. Laboratory rotations complement formal classroom learning.

In order to successfully complete the Core Curriculum, student must achieve a High Pass (HP) or better to remain in good academic standing. Students will be allowed no more than one Low Pass (LP) on any required course with the exception of Fundamental Immunology & Microbiology.

PhD Progress Point Deadlines

</tbody>
</table>

IMP students are expected to complete all requirements for the PhD degree within six years after matriculation in the program. Exceptions must be reviewed and approved by the Program Directors, Co-Chairs and Dean of the Graduate School.

1. COURSE REQUIREMENTS

IMP students are expected to fulfill the following requirements for the PhD degree:

A. Core Curricula
   • Fundamental Immunology & Microbiology
   • Responsible Conduct of Research (RCR)
   • Quantitative Understanding in Biology I (qBio)
   • Bioinformatics (must be taken when available)
   • Scientific Writing Workshop (must be taken when available)

B. Advanced Coursework
   At least ONE module of Advanced Topics in Immunology (ATI) must be completed before a student is eligible for the ACE. TWO additional modules of ATI must be taken in subsequent years.
C. Electives
Students are recommended to take one of the following courses:

- Molecular Genetics
- Biochemistry & Structural Biology
- Microbial Pathogenesis – Offered at RU

Please note that Molecular Genetics, Biochemistry and Structural Biology OR one half of Microbial Pathogenesis may be substituted for one ATI module after the ACE.

D. Seminars and Journal Clubs
IMP students are required to register and participate in these year-long seminars during the entire duration of their graduate training. Students MUST register for the Immunology Research in Progress and Immunology Seminar Series once a year in the Fall in order to receive credits and either a grade of "P" (pass) or "F" (fail) will be included in your transcript.

- Immunology Research in Progress (RIP)
  IMP students and postdoctoral fellows present work in progress and related papers at a weekly seminar. Students, postdoctoral fellows and faculty in the IMP community attend the seminars.

- Immunology Seminar Series
  The Immunology Seminar Series is a joint effort between Weill Cornell Medicine, Sloan Kettering Institute, The Rockefeller University and Hospital for Special Surgery. Students will have the opportunities to meet with the visiting speaker.

- Journal Club (JC)
  This is not a registered course. However, students are required to participate. Options include the IMP Student JC, Rudensky Lab’s JC or another lab meeting/JC.

Students are encouraged to attend additional seminars and journal clubs in areas of their particular interest or in areas that they wish to explore.

NB
- In addition to courses, student must register for Lab Rotations (LROT), ACE (ACEX.5001.02.WCM) and Final Examination (FINL.5001.04.WCM) when appropriate.
- Students who have passed the ACE MUST register for the Dissertation Research in the Fall (REST. 5004.01) and Spring (REST 5004.03) every academic year until he/she is ready to defend. All registration should be completed in a timely manner, on or before the set deadline.

2. LABORATORY ROTATIONS
Students are expected to complete three lab rotations before undertaking thesis research, each lasting about 10-12 weeks. The major objective of these rotations is to expose students to a broad range of topics and hands-on research experience, and eventually to allow the student to identify a thesis lab.

The rotation project is often related to the ongoing projects in the lab, but ideally should provide the student a distinct experimental focus. At the end of each rotation, students are expected to present their work at the IMP Rotation Symposium.
Following each rotation, a concise written report (no more than 1 page long) must be submitted to the rotation sponsor. Once approved, the finalized report must be submitted to the Program Coordinator within two weeks of completion of the rotation. The report should describe the project (theoretical background, aims and results) as well as the overall significance of the research undertaken during laboratory rotation. These reports become part of the student's file and evaluation prior to the ACE examination.

Under special circumstances, less than 3 rotations are permitted for students with extensive prior research lab experience. If the student has not identified a thesis lab by the beginning of the second year, a fourth rotation may be permitted, with the approval of the Program Director. As such, a thesis lab must be identified before the start of the third year (fifth semester).

For each rotation, the student must register and submit the Rotation Agreement form via LEARN. Once a student has completed a rotation, the Rotation Report & Evaluation form must be filed by both student and rotation sponsor. Grading of rotations will be on a Pass/Fail basis.

**NB** Each lab rotation must be approved by the Program Directors in advance of the rotation start date.

**Chalk Talks**

In the beginning of the month of September, the IMP faculty members will give brief presentations about their research. The purpose of this week-long event is to help first year students choose labs for their rotations. At each Chalk Talk, four to five faculty members will discuss their work and take questions from students.

**3. ACADEMIC ADVISING**

First year students are assigned to one of the IMP Program Directors to address questions about courses, rotations, or problems that may surface during the first year of matriculation. The Program Directors will meet with the students individually twice in their first year of studies to review his/her academic progress. Students are expected to identify a thesis lab/major sponsor at the end of first year (by June 30th) and the PI will advise him/her. The Program Directors meet and advise students after their first year as needed.

Once a student passes the Admission to Doctoral Candidacy Examination (ACE), he/she will be required to assemble a Thesis Committee, comprising the major sponsor (PI) and two additional faculty members knowledgeable in the field of study (minor sponsors) with the aid of their PI. Each student (PhD and MD/PhD) should complete the Nomination of Special Thesis Committee form. This form should be submitted to the Program Coordinator with all the required signatures as soon as possible.

The Thesis Committee advises the student in his/her research, meeting periodically to monitor progress, and to oversee development of the thesis. During this time, the student continues to participate in the other educational programs offered by the graduate program but works full time in the laboratory.

Formal progress report must be filed with the Graduate School annually. To meet this requirement, students are expected to meet once a year with the Special Thesis Committee and complete the Thesis Committee Meeting Evaluation form. Students must submit the signed form to the Program Coordinator within a week after the meeting.
4. **IMP Annual Scientific Retreat**

The IMP Scientific Retreat is held yearly in the third week of October at the Mohonk Mountain House in New Paltz, NY. This event provides an opportunity for faculty, students and postdoctoral fellows to interact with each other on both a personal and professional level.

The two-day event includes a keynote address by an internationally prominent scientist, lectures on a variety of topics and poster presentations by graduate students and postdocs. Ample time is set aside for recreational activities.

### YEAR 1

**Fundamental Immunology & Microbiology**

- First Rotation
- Second Rotation
- Third Rotation
- Immunology Research in Progress (RIP)
- Seminars in Immunology
- Journal Club (not a course)

### YEAR 2

- **Advanced Topics in Immunology***
- **Quantitative Understanding in Biology**
- Admission to Doctoral Candidacy Exam
- Immunology Research in Progress (RIP)
- Seminars in Immunology
- Journal Club (not a course)

### YEAR 3 and BEYOND

- **Advanced Topics in Immunology***
- **Molecular Genetics** *
- **Biochemistry & Structural Biology**
- **Microbial Pathogenesis**
- Immunology Research in Progress (RIP)
- Seminars in Immunology
- Journal Club (not a course)
- IMP Dissertation Research

* Different modules are offered every Fall. At least **ONE** module must be taken before the ACE and **TWO** additional modules must be taken in subsequent years.

** Either one of these courses may be substituted for one module of Advanced Topics in Immunology after passing the ACE.
ADVANCEMENT TO CANDIDACY

Students will be advanced to PhD candidacy after all the IMP program requirements, advance coursework and Admission to Candidacy exam (ACE) have been successfully completed. Students who leave the program after passing their ACE are eligible for the terminal Master’s degree with the approval from the Program Directors, PI and Graduate School.

1. ADMISSION to CANDIDANCY EXAMINATION (ACE)

Only students who have successfully completed the Fundamental Immunology & Microbiology course and at least one module of Advanced Topics in Immunology are eligible to take the ACE. Students are strongly encouraged to read successful NIH grant applications as preparation for the ACE and to take advantage of the Advanced Topics in Immunology modules to practice developing specific aims and experimental designs.

The ACE consists of three parts: 1) Topic submission and approval 2) The Written Examination, which must be approved by the ACE Assigner and the student’s assigned ACE committee before proceeding to 3) the oral examination. The Oral Examination must be completed no later than June 30th of the second year of graduate training. Students who do not take the oral exam by June 30th are placed on academic probation for 3 months, except in extenuating circumstances as approved by the Dean of the Graduate School, upon request from the Program Director.

The goal of the ACE is two-fold. First, the ACE is an important tool for the assessment of the progress of each student. Secondly, the ACE provides for an excellent opportunity for each student to expand their knowledge of an area of science, under the mentorship of the faculty.

The ACE will evaluate each student’s:
- Ability to think independently.
- Ability to think critically.
- Ability to explain and understand the present status, direction and significance of the chosen ACE topic.
- Ability to generate novel hypotheses and to design appropriate experiments that address these hypotheses.
- Ability to interpret and evaluate experimental data.
- Fund of general knowledge.

The ACE will provide the means for the student to:
- Exercise independence in study design.
- Study in depth, a subject of particular interest or value to them.
- Develop a research plan in the format of an NIH grant application (R21 style).
- Practice scientific writing skills.
- Be involved in scientific discussions with several faculty members outside the thesis lab.
- Receive critical feedback.

As restated for emphasis and clarity, success in the ACE is contingent on the student demonstrating (1) independence of thought, (2) creativity and skill in design of experimental approaches to (3) a problem of scientific interest that could advance the field.
General Information

- The ACE will be given at a single time each year, in the late Spring.
- The student **MUST** submit an official *Application for ACE* form at least **TWO WEEKS** prior to the scheduled oral exam date.
- The student will get no written feedback on a “Pass” written exam until after the oral exam.
- Revisions of the written exam, if any, will precede rather than follow the oral exam.
- Each student will have an individual ACE committee that will be assigned by the ACE assigner.
- Students will **NOT** choose the faculty on their ACE committee. However, students have the right to petition with cause for replacement of a committee member in case a personal conflict exists between them.
- The written and oral examinations are separated and to be graded independently.

A. ACE Assigner and Committee

The Assigner, an IMP faculty member appointed by the Program Co-chairs (Dr. Michael Glickman presently), will meet with students to discuss the ACE format and answer questions one month prior to the topic submission deadline. At this time, each student is encouraged to begin choosing an appropriate topic and develop it into a proposal outline.

Once the Assigner approves the outline based on the criteria outlined below, the Assigner will designate an ACE Committee composed of four faculty members from the IMP Program or, if necessary, from another program. In addition, the Assigner will designate one of the committee members as the Chair of the Examining Committee to maintain consistent guidelines and expectations for both examinations.

B. ACE Topic/Aims Submission

The topic is up to the student, with the following advisory considerations - it is the student’s privilege to have flexibility and latitude in choice of the ACE topic. However, it is the student’s responsibility to convincingly demonstrate independence of thought. The closer the ACE topic is to the thesis topic, the more difficult it may be to establish the independence of the student’s thinking. It is often the case that the ACE is begun when the thesis topic is not defined, or the thesis topic that was initially chosen will not continue. An independently conceived ACE topic may give shape to, or even become, a thesis topic.

By **February 1st**, student must submit an outline of his/her proposed research topic to the ACE Assigner. The outline should specify no more than 3 specific aims and should not exceed **one page**, inclusive of up to five key references on the second page if necessary. The synopsis should include a brief description of the system to be studied, the question/hypothesis/model to be tested and the experimental approaches under consideration. Good topic choices will be timely, original, conceptually important and/or clinically relevant.

The only restriction on topic choice is that the PI must certify that the specific aims were developed independently of the PI, and moreover, when the written exam is submitted, the PI must certify that the work proposed therein is not derivative of past or current work in that laboratory.
The Assigner will determine if the outline meets the criterion of sufficient topical independence from the work of the thesis lab.

Students must also include with the topic outline the name of his/her thesis advisor. Failure to include this information will result in the topic being rejected without substantive review. Thus, it behooves the student to submit the outline to the Assigner in advance of the topic submission deadline.

Students will be informed by their ACE Committee of the approval of their choice of topic/aims in ten days or less. If it is not approved, students will have two weeks to submit a new topic. Topics that closely overlap with the student’s thesis project or with the specific interests of the thesis laboratory will be rejected.

C. Written Proposal/Examination

Students will have four weeks to submit their written proposal to the ACE Examining Committee once the topic/aim is approved by the ACE assigner and the ACE committee (Dr. Michael Glickman from 2018-) The written proposal should not exceed six pages (exclusive of title page and references) and must be the work of the student alone. The student may seek any advice they wish, but neither from their ACE Committee nor their thesis mentor. The student can seek advice from WGS faculty who are not members of the ACE committee.

Primary, secondary and tertiary reviewers will be assigned from the ACE Committee, all of who will read and rate the proposal. The ACE Committee will have 2 weeks to review the student's written proposal and recommend “Approval” or “Revision/Disapproval” of the proposal. All ACE reviewers will prepare a written critique in a concerted manner.

Approval of the written exam means that the student can proceed to the oral exam, but does not preclude that the student may be asked to revise the written proposal if the oral exam is tabled. Revised proposal must be submitted to the Assigner, Chair of the Committee and Program Coordinator no later than two weeks after receipt of the critique. The revised proposal should include a preface section that briefly summarizes how the points raised in the critique have been rectified. If the revised proposal is disapproved again by the ACE Committee, it is tantamount to a failing grade for the student.

Upon proposal approval, the Application for Admission-to-Doctoral Candidacy Examination form must be completed and filed with the Graduate School Office two weeks prior to the scheduled oral exam date. Failure to register in a timely manner will result in the cancellation of the Oral Exam.

NB Approval of the written proposal is not equivalent to a “Pass” for the entire ACE process, it implies that the written proposal is sufficient to proceed to oral exam. The student should be aware that additional questions about the written proposal, including but not limited to those raised in written critiques, will arise at the oral exam. The student should prepare accordingly.

Formatting Instructions:

- **Font**: Use an Arial typeface with a font size of 11 points or Times New Roman typeface with a font size 12 points.

- **Spacing**: Single-spaced for all pages.
• **Margins**: Use US Letter size (8.5” X 11”) and one inch margins (top, bottom, left and right) for all pages. Each page must have your name and be numbered.

NB Failure to adhere to the format will result in immediate rejection of the written proposal without consideration of the scientific merits.

**D. Oral Examination**

Students will have up to **14 days** from the receipt date of the written proposal critique/approval to complete the Oral Exam. It is strongly recommended that students practice their oral presentation with an audience consisting of second year and senior students. Extension of the 14-day window is only possible due to faculty scheduling conflicts and must be approved by Dr. Glickman.

Immediately prior to the exam, all committee members and the thesis advisor should be present for the initial evaluation of the student’s written proposal, laboratory and classroom performance; the student should not be present during this discussion. Following the discussion of the student’s progress, the thesis advisor will be excused and the student will be invited to present the key features of the research proposal. The presentation should take about 15 - 20 minutes, during which time students should expect to be interrupted by the faculty.

When the oral presentation has concluded, the student will be excused to allow the committee to discuss the exam results and vote in his/her absent. The committee may vote on one of the 3 possible outcomes:

- **APPROVAL (Pass)** – A “Pass” signifies satisfactory completion of the candidacy exam.

- **TABLE** – “Table” will entail some follow up oral exercise for the student to address the ACE committee’s remaining concerns.

- **FAIL** – Student will be referred to the Student Evaluation Committee (SEC) for consideration in light of the student's overall academic performance. In such cases, the SEC can recommend that the student either be allowed to re-take the oral examination or asked to leave the program. The student will only be permitted one retake of the Oral Exam, within a time frame that is reasonable and acceptable to all parties involved.

**Continuing Education**

If a student has demonstrated a generally sound understanding of important principles during the ACE, but has a weakness in one or more areas, the ACE Committee may pass the student with the provision that the weaknesses should be readdressed by taking one or more courses. This is termed a “Conditional Pass”.

The development of the scholarship and research abilities of senior students is the responsibility of both the Examination Committee that conducts the ACE and the Thesis Special Committee. Either of these committees can make recommendations or impose requirements on the student beyond the general requirements of the Graduate School and the educational standards outlined by the Graduate Program in Immunology.

These requirements may include formal courses, upper level seminar style courses, undertaking an independent reading course supervised by a faculty member, participation in seminars and poster sessions,
requirements to give talks in formal or informal seminar series, etc. These types of activities are often voluntarily undertaken by students because of their desire to strengthen their abilities, but it is the responsibility of the Thesis Committee to ensure that the student is well prepared for their future career.

While completing thesis work, students are expected to continue to attend seminars and are strongly encourage taking or auditing graduate courses to continue their education and broaden their knowledge of Immunology and related disciplines.

2. FINAL EXAMINATION (THESIS DEFENSE)

IMP students are expected to defend and complete all requirements for the PhD degree within six years after matriculation in the PhD program. Exceptions must be reviewed and approved by the Program Director, Co-Chairs and Dean of the Graduate School.

Students should read the guidelines and instructions for the Final Examination and the Student Exit Checklist on the Graduate School website. Failure to complete the steps detailed on the respective documents on the WCGSMS website will result in a delay of your degree conferral.

It is the student’s responsibility to schedule a mutually agreeable date and time with the Examining Committee for both the public lecture and closed section for the oral defense.

A. Process Timeline

- Students must submit the Application for Final Examination form **30 days** before the scheduled defense.

- **Two weeks** prior to the examination, the Approval for Thesis of Defense form must be submitted to the Graduate School Office. The Examining Committee must sign and attest that the thesis is ready to be examined.

B. Dissertation Deposit

For thesis formatting guidelines, students should read the Doctoral-Master’s Thesis Requirements on the WCGSMS (Student Forms) website.

The dissertation may be deposited at any time during the year, but the following deposit deadlines determine the date of the degree. Please note that these dates differ from year-to-year.

GRADUATE SCHOOL REQUIREMENTS

All PhD and MD/PhD students are required to fulfill the following requirements for the PhD degree on a yearly basis throughout your graduate training:

1. Annual Evaluation Meeting (First Year PhD Students)

All First-Year students are required to complete the Annual Students Evaluation and the NIH-mandated Individual Development Plan (IDP) by the end of first year. Each student must meet with the designated IMP faculty (usually the Program Director) and completed both forms by June 30th.

2. Thesis Committee Meeting (All PhD and MD/PhD Students)

Students are required to meet with his/her Thesis Committee within 6 months of completing the ACE, and subsequently once a year. The Graduate School requires all students to meet with the Thesis Committee at least once a year throughout their graduate training. The IMP program encourages more frequent meetings. To meet this requirement, students are expected to complete the Thesis Committee Meeting Evaluation form and return the signed form to the Program Coordinator.

Timely meetings are imperative and students should take the initiative in scheduling these meetings. When a student fails to have a Thesis Committee meeting for more than 12 months, he/she is considered to be in poor academic standing.

3. Individual Development Plan (IDP) (Rising Third Year and Beyond)

The Graduate School requires an annual NIH-mandated IDP for all PhD students. The IDP aims to assist students with identifying professional goals and objectives. It also aims to ensure that students are working proactively towards developing the skills and competencies needed to achieve short and long-term career goals.

The IDP process should be completed every year in the beginning of each academic calendar (July 1st) no later than August 15th.

4. Progression to Degree (Rising Sixth Year and Beyond)

Students in their sixth year and beyond must complete the Progression to Degree form with his or her PI every year in the beginning of each academic calendar (July 1st) in conjunction with the Individual Development Plan (IDP). The deadline to submit the signed Progression to Degree form is August 15th.
IMP GENERAL POLICY

1. Changing Programs or Thesis Labs

IMP students are encouraged to perform their thesis work in the laboratory of a faculty member of the Immunology Program. Thesis work in a laboratory within other Graduate School Programs is permitted with approval of the IMP Program Directors.

Students in good standing in a program other than Immunology and Microbial Pathogenesis (IMP) can transfer to the IMP Program provided that certain requirements are fulfilled. The terms of the transfer are to be discussed with the Program Directors of both the original program and the IMP Program. In addition, the transfer requires formal approval from both Program Directors and the Associate Dean for Program Development. Students changing into the IMP Program will be required to complete the Fundamental Immunology course, as well as additional Immunology courses as determined by the Program Directors.

2. Vacation Policy

Students are expected to inform the PI or the rotation advisor of all proposed and planned absences so that the flow of experimental work can be planned in advance. Attending scientific meetings and days explicitly taken off for study and preparation for examinations do not count as vacation days.

In the event of an unanticipated absence, students should make every effort to communicate with the PI, Program Directors and/or Graduate School as soon as possible. Any unexplained absence will constitute lack of satisfactory progress in the Program and can result in academic probation.

NB It is important that you read the Code of Legislation of the Weill Cornell Graduate School of Medical Sciences for Graduate School guidelines and policy (especially page 9 - 15). This document can be found on the WCGSMS (Student Forms).
ACADEMIC PROGRESS CHECKLIST

❖ FIRST YEAR

Course Registration:

☐ Fundamental Immunology & Microbiology (IAMP.5004) – Year-long course
☐ Immunology Research in Progress (IAMP.9530)
☐ Seminars in Immunology (IAMP.9002)
☐ Responsible Conduct in Research – Offered at MSK in Spring
☐ Advanced Topics in Immunology - Optional

You must register for all Lab Rotations (refer to page 6 for set deadlines)

☐ Complete Annual Student Evaluation and Individual Development Progress forms at the end of first year (by June 30th)

☐ Declare a lab/PI at the end of first year (June 30th)

❖ SECOND YEAR

Course Registration:

☐ Quantitative Understanding in Biology (PBSB.5005)
☐ Immunology Research in Progress (IAMP.9530)
☐ Seminars in Immunology (IAMP.9002)
☐ Advanced Topics in Immunology – Optional; at least one module must be taken before ACE
☐ Molecular Genetics (BCMB.5001) – Optional
☐ Biochemistry & Structural Biology (BCMB.5002) – Optional
☐ Microbial Pathogenesis – Optional; offered at RU
☐ ACE (ACEX.5001.02.WCM) – Register when ready to take ACE

ACE Preparation (Spring Semester):

☐ Submit an official Application for ACE form at least TWO WEEKS prior to the scheduled oral exam date
The ACE must be completed no later than June 30th

Special Thesis Committee:

☐ Assemble thesis committee and submit the Nomination of Special Thesis Committee form once you pass the ACE

☐ Meet and complete Thesis Committee Meeting Evaluation form six months AFTER you pass the ACE
EVERY YEAR THROUGHOUT YOUR GRADUATE TRAINING

Course Registration:

☐ Immunology Research in Progress (IAMP.9530)
☐ Seminars in Immunology (IAMP.9002)
☐ Dissertation Research (REST.5004.01-Fall) & (REST.5004.03-Spring) – All post-ACE students

PhD Degree Requirements:

☐ Annual Thesis Committee Meeting – Must meet with thesis committee and complete Thesis Committee Meeting Evaluation form once a year throughout your graduate training

☐ Individual Development Plan (IDP) - The IDP process should be completed once a year at the beginning of each academic calendar prior to August 15th

☐ Progression to Degree – Students in sixth year and beyond must complete the Progression to Degree form every year in conjunction with the IDP prior to August 15th
